

# Teacher Workshop

## Geospatial Technology in the Classroom

Presented by Esri, Inc. and History Colorado

### Description

Learn ways to bring geospatial technology into your classroom. Whether you teach science, literature, math, or social studies, there are materials that can support your students in asking spatial questions and introducing them to essential online mapping tools. This professional development workshop is intended for K-12 educators including classroom teachers, instructional coaches, STEM coordinators, district staff, pre-service instructors, informal K-12 educators, or outreach specialists. Participants will receive access to Esri online accounts and materials, be introduced to the Esri school program, and become part of a network of teachers in the region who are interested in stretching their students' understanding of mapping and technology.

### Locations

Four identical workshops will be held in different locations across Colorado.

History Colorado, Denver, July 14, 2018

Fort Morgan History Museum, Fort Morgan, September 22, 2018

El Pueblo History Museum, October 27, 2018

Ute Indian Museum, October 27, 2018

### Details

Time: 7:30 a.m.—4:30 p.m.
